LAXITY

PHOTO-AGING

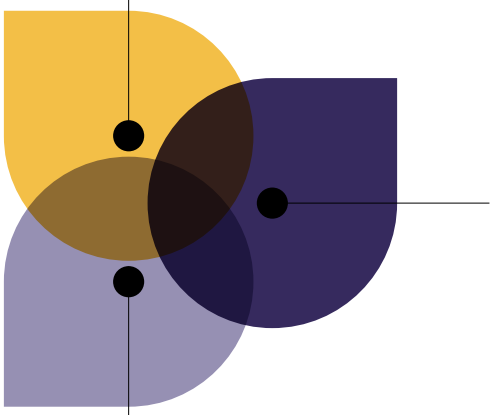

Key Principles

DEKA has designed and developed a new leading-edge platform: PRISMA. This device sets a new standard in aesthetic technology by combining Intense Pulsed Light (IPL), Radio Frequency (RF) and Electro Muscle Stimulation (EMS) in a powerful platform. This unique integration enables providers to treat multiple signs of aging, with minimal discomfort and downtime.
PRISMA's versatility enables practitioners to tailor treatments to patients' needs and concerns. It creates personalized protocols that target their unique combination of aging symptoms from discoloration and texture concerns to laxity and muscle tone.

Why Choosing **PRISMA:**

The Best in IPL

PRISMA was designed to integrate the best of IPL technologies into three IPL handpieces: VERDE, SOL, and AMBRA. The efficacy of the IPL handpieces is optimized by the built-in cooling system to enhance comfort and safety. The different wavelengths allow to cover a broad range of treatments.

Action Starting from the Deep

The RF and EMS AZUR handpiece allows you to start from deeper layers whilst supporting the IPL action.

Clinical Efficacy

PRISMA redefines the photofacial treatments with a synergistic approach to the most common signs of aging: Discoloration, laxity and muscle tone tackled in a single treatment.

PRISMA

THE SCIENCE BEHIND

The Power of Four Different Treatments

PRISMA is engineered to address a comprehensive range of aging-related skin conditions, extending well beyond the treatment of superficial discoloration. Equipped with four advanced, technology-driven handpieces, it delivers targeted, customizable treatments with high clinical performance, making it a strategic and revenue-increasing investment for any advanced aesthetic practice.
The sensor on the RF handpiece ensures that the target tissue reaches an optimal temperature without the risk of melting fat or causing discomfort. No other IPL device allows providers to dial in the cooling to optimize patient's comfort without compromising efficacy.

AZUR

Combines EMS and RF to promote skin tightening and enhance facial muscle tone, thereby reducing the visible signs of aging. The AZUR handpiece is equipped with two interchangeable tips, large and small, to accommodate different treatment areas.

THE SCIENCE BEHIND

The Next Generation of IPL

The IPL handpieces are equipped with a contact sensor to ensure maximum energy transfer under complete safety conditions, and are provided with a finger switch that allows the operator to control emission. In addition, the integrated skin cooling system prevents excessive temperature increases in the superficial epidermis.

SOL

IPL 550 - 1200 nm

It is indicated for benign pigmented lesions treatments in darker skin type.

VERDE

IPL with Dual Band Filter:
IPL 500 - 670 nm
IPL 870 - 1200 nm

Ideal for rapid treatments. The integrated dual filter improves results on red and brown target in less time. It is indicated for pigmented and vascular benign lesions treatments in lighter skin types.

AMBRA

IPL 600 - 1200 nm

Featuring a high-performance Xenon lamp with an integrated sapphire cooling system, and its filter is optimized for fast, effective treatments of large areas. It is indicated for skin rejuvenation and hair removal.

THE SCIENCE BEHIND

Multilayers Treatments

PRISMA stands out with its integrated, multilayer approach, addressing all signs of facial aging from muscle tone to skin laxity and discoloration for results beyond any single technology. Adjustable cooling ensures patients experience maximum comfort, while providers can safely and precisely treat target areas.

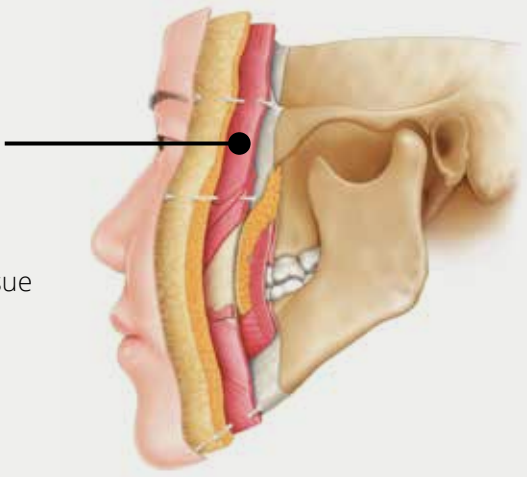

A Full Spectrum Approach

PRISMA integrates three proven technologies, **IPL**, **RF**, and **EMS**, into a single premium device, engineered to combine the most advanced IPL performance with the VERDE, SOL, and AMBRA handpieces along with radiofrequency and electromuscular stimulation technologies in the AZUR handpiece.

The **EMS** technology delivers selective impulses that cause facial muscle contractions to improve muscle tone, blood flow and definition.

This process:

- Selectively stimulates facial muscles
- Improves muscle tone and facial contours
- Enhances definition in key areas
- Improves circulation and blood flow for healthier tissue

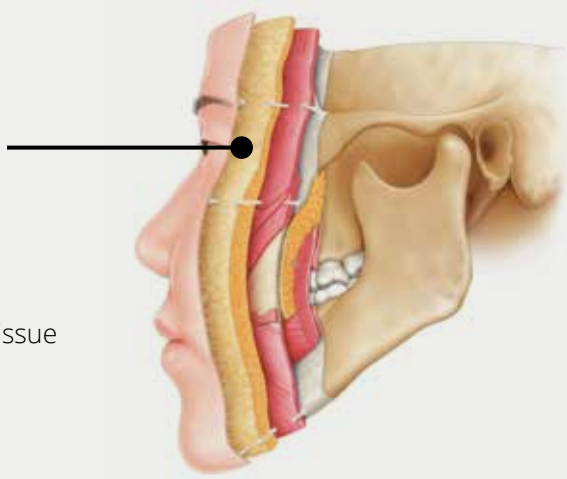

INNATE ABILITY

THE SCIENCE BEHIND

The **RF** technology converts electrical energy into heat, creating a controlled thermal effect that remodels collagen and promotes tissue regeneration without damaging the epidermis. Working just above the muscle layer, PRISMA's RF technology delivers thermal energy directly to the dermis, where it stimulates the production of collagen and elastin.

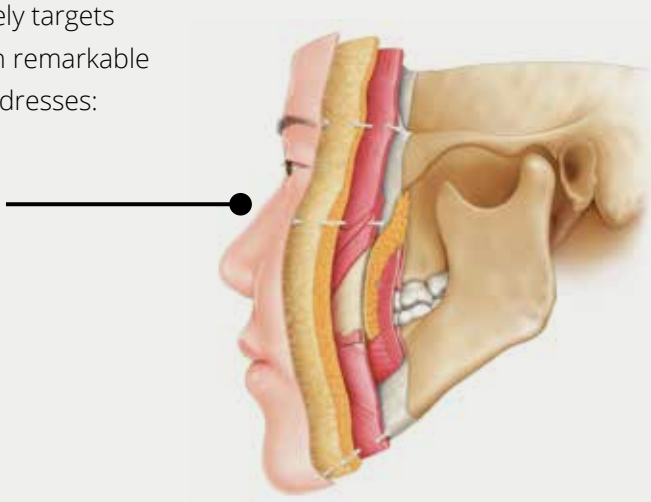

This energy:

- Tightens existing collagen fibers
- Triggers new collagen production
- Improves skin firmness and elasticity
- Reduces the appearance of fine lines and wrinkles
- Improves circulation and blood flow for healthier tissue

The **IPL** source generates a specific wavelengths to target chromophores in the skin, effectively reducing discoloration while promoting a more even, radiant complexion. At surface level, PRISMA's advanced IPL technology precisely targets pigmentation issues and vascular concerns with remarkable efficiency. This proven technology effectively addresses:

- Sun damage and brown spots
- Rosacea and facial redness
- Capillaries

THE PERFECT MATCH

PRISMA Strength

- **3 in 1 Technologies**.
- **Smart Investment for Scalable Growth**
  no consumables, reduced overhead, and expanded treatment capabilities.
- **Superior ROI** potential; **AMPLIFY** results for your patients and **MAXIMIZE** your financial return by **COMBINING** three proven Technologies (IPL – RF and EMS) in one device.
- Built to target more layers of the skin tackle the of aging.
- Enhances **SAFETY** with built-in cooling.
- PRISMA is designed to enhance both patient outcomes and practice performance.

DEKA Innate Ability

A spin-off of the El.En. Group, DEKA is a world-class leader in the design and manufacture of lasers and light sources for applications in the medical field. DEKA markets its devices in more than 120 countries throughout an extensive network of international distributors as well as direct offices in Italy, France, Japan and USA. Excellence is the hallmark of DEKA's experience and recognition garnered in the sphere of R&D in over thirty years of activity. Quality, innovation and technological excellence place DEKA and its products in a unique and distinguished position in the global arena. DEKA produces laser devices in accordance with the specifications of Regulation 2017/745/EU and according to the ISO 9001 and ISO 13485 quality system.
